It is with a heavy heart that we bid farewell to our Dean, Tony Liss. The good news is that he is being appointed to a position going far. He will be the new interim Provost of the College and will work with the President to right our fine institution. He leaves a last mark on the Division of Science and we will miss him in his absence. Tony’s achievements in the Division are too many to mention here are a few highlights. Tony made tremendous strides with getting the Science Division on the map and upgrading our image. He created this very product - The Gazette! We will continue to use this medium to share news and events with the Science community. He is also responsible for our Twitter presence. He led in the development of the Department information videos that are now on the opening pages of our department websites. Tony assembled and led the Division of Science Diversity Committee whose goal is to do everything possible to attract and maintain a diverse Faculty in the Division. Under Tony’s leadership the Dean has dramatically increased funding and we are still exploring ways to realize an Interdisciplinary Biodiversity Center. Also, through generous donations cultivated by Tony, we’ve awarded the first every CUNY & Division of Science doctoral fellowships and have begun to make a distinct mark through our work with the Graduate Center. Outside of the College, Tony found time to partner in the CUNY Science + arts engagement project which is developing pop-up exhibits in the CCNY community.

DUNK! The Science of Basketball, CUNY

Dr. Adrianne Corseri, Irving Estevez

Our panel members will be:

Dr. Michelle Juarez
Dr. Michael Samms
Irving Estevez
Adrienne Corseri

Dr. Diana Gutierrez

These panel members have a lot to share about their own experiences and will have some great advice for students from underrepresented groups planning to enter the sciences.

CCAPP and WIRS are partnering with us, in bio. Should be a really nice event!

Send your news to cngnalle@ccny.cuny.edu if you would like them to be featured here.
